Executive Summary Report: Global Superstore Sales Performance

AnalystLab Africa Data Analytics Internship, Week 2 | Prepared by: Georgewill Stephanie Alaye

1. Overview

This report summarises what the Global Superstore Executive Dashboard shows about sales, profit, customers, products and regions. All figures come from the dashboard with the Year, Region and Segment slicers set to All. The company generated **$12.6M in sales and $1.47M in profit, a margin of about 12%, across roughly 25K orders** (average sale: $505).

2. Five Key Business Insights

Insight 1: Sales are strong, but profit is thin relative to revenue. Evidence: KPI cards show $12.6M sales against $1.47M profit (11.6% margin).

Insight 2: Central is the strongest region, and margins vary widely across regions. Evidence: Central leads with $2.82M sales and $311K profit (Sales by Region chart and matrix). South ($1.6M), North ($1.2M) and Oceania ($1.1M) follow. Margins range from 27% in Canada and 20% in North Asia down to 5% in EMEA and 2% in Southeast Asia.

Insight 3: Consumers drive about half of revenue. Evidence: Customer Segment Revenue chart shows Consumer $6.5M (about 51%), Corporate $3.8M and Home Office $2.3M.

Insight 4: Product categories are evenly matched, and Technology products lead on profit. Evidence: Product Category Performance shows Technology about $4.7M, Furniture about $4.1M and Office Supplies about $3.8M. The Top 10 Products by Profit chart is led by the Canon imageCLASS 2200 Advanced Copier (about $25K profit), followed by the Cisco and Motorola full-size smartphones (about $17K each).

Insight 5: Sales grow through the year and peak late in the year, with a dip in July. Evidence: The Sales/Profit Trend chart shows monthly sales rising from roughly $0.5M in January to about $1.5M by December, with a clear drop in July in both sales and profit. (The chart combines all years by month.)

3. Three Business Risks

Risk 1: Southeast Asia earns almost no profit. Evidence: $884K in sales but only $17.9K profit, a 2% margin.

Risk 2: Large regions are underperforming on margin. Evidence: South has $1.6M sales at a 9% margin, and EMEA has $806K sales at a 5% margin, both well below the 12% company average. If these two regions and Southeast Asia matched the 12% average, profit would rise by roughly $190K (an illustrative estimate, about 13% more profit).

Risk 3: Heavy reliance on one shipping mode. Evidence: Sales by Ship Mode shows Standard Class carries about 60% of sales, with Second Class at 20%, First Class at 14% and Same Day at 5%. Delivery problems in Standard Class would affect most of the business.

4. Three Business Opportunities

Opportunity 1: Grow in high-margin regions. Evidence: Canada (27%), North Asia (20%), Central Asia (18%) and North (16%) all earn well above the 12% average.

Opportunity 2: Capture more of the late-year demand. Evidence: Sales and profit climb steadily towards the end of the year in the trend chart, and July is a clear low point to lift.

Opportunity 3: Grow Corporate and Home Office customers. Evidence: Together they bring $6.1M (about 48% of sales), but each is smaller than Consumer, so there is room to grow.

5. Five Actionable Recommendations

1. **Review pricing, discounts and costs in Southeast Asia, EMEA and South.** Supported by Risks 1 and 2: low margins on $3.3M of combined sales.
2. **Invest in marketing and distribution in Canada, North Asia, Central Asia and North.** Supported by Opportunity 1: these regions convert sales to profit most efficiently.
3. **Plan stock, staffing and promotions ahead of the late-year peak, and run offers to lift July.** Supported by Insight 5 and Opportunity 2.
4. **Launch targeted offers for Corporate and Home Office customers.** Supported by Insight 3 and Opportunity 3.
5. **Promote high-profit Technology products and review shipping options beyond Standard Class.** Supported by Insight 4 and Risk 3: feature the top-profit items and test faster or alternative delivery to reduce dependence on one mode.

6. Conclusion

The business is growing and profitable overall, but profit is unevenly distributed. The clearest gains come from fixing margins in a few regions, growing where margins are already strong, and preparing for the late-year peak.
